

## Discover screen content clipped / unreadable; misleading “feature in next version” banner shown

**ID:** ST12855

**Reported by:** Gajini Prasanth

**Date:** 2025-12-11

### Environment

- Platform: Android
- App: PRAM
- Version: 1.30.1
- Last Update: 8 Dec 2025

### Summary

1. On the Discover screen the lower content (promotional card + banner) is visually cut off — users cannot view full information because the next section overlays/overflows and there’s no clear scroll affordance. This breaks readability and discoverability of content.
2. On the Change Language screen a modal/tooltip saying “Our team is racing... roll out this feature in the next version — STAY TUNED!” is shown to users while the feature is apparently still under development. This communicates a false promise and reduces user trust.

### Steps to reproduce

1. Open the app and navigate to the **Discover** tab.
2. Observe the promotional card and the large headline (“NO COST Educational ERP...” — content below is partially obscured / truncated and not obviously scrollable. (See screenshot 1.)
3. Navigate to **Change Language** screen.
4. Observe the informational overlay/modal that claims feature rollout “in the next version”

### Actual result

- Important Discover content is partially hidden; users cannot read or interact with below-the-fold content.
- The “feature coming soon” overlay is visible in a way that looks like a guarantee rather than a placeholder; users may be misled.

### Expected result

- Discover screen content should be fully visible or clearly scrollable without overlapping/obscuring critical text or CTAs. Layout should adapt to different screen sizes and safe areas so the entire headline and promotional CTA are readable.
- If a feature is not available, do **not** show misleading promise banners to end users. If an informational message is necessary, show a neutral “Coming soon (beta)” badge only where appropriate or hide until feature is actually available.

## Severity / Priority

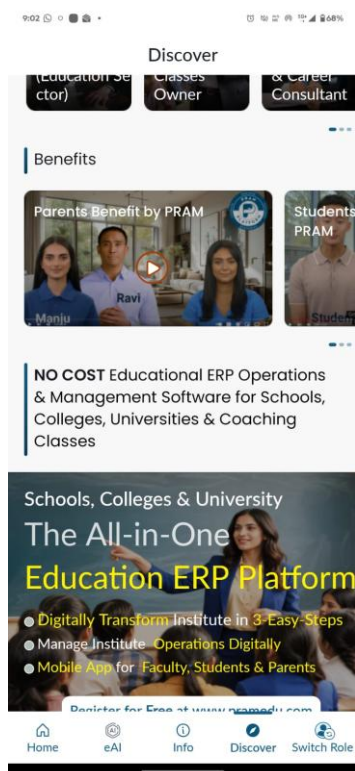

- Severity: Major (affects content readability and user trust)
- Priority: P1 or P2 — recommend quick fix before next release

## Suggested fixes / recommendations

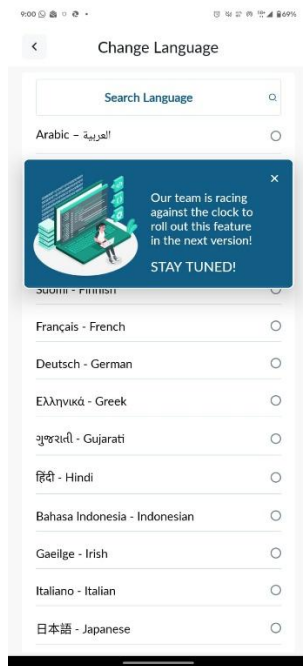

1. Layout fix (UI): Ensure the Discover screen uses proper container heights, safe area padding, and responsive scaling. Avoid fixed heights that cause overlap — use relative sizing and allow vertical scroll for long content.
2. Z-index / stacking: Verify that the header, carousels, and promo card do not overlap; apply correct z-index and margin/padding rules.
3. Accessibility: Ensure that the promotional card includes clear focusable elements and that the page indicates scrollability (e.g., partial content plus a visual scroll indicator).
4. Messaging policy: Remove or replace the “Our team is racing...” banner on public screens. If you must inform users about upcoming features, use a non-committal label (e.g., “Feature in development — subscribe for updates”) or show it only in a changelog/opt-in beta area.
5. QA: Add automated visual/regression tests for Discover and Change-language screens across common device sizes.

## Attachments

- Screenshot 1: Discover screen (content clipped)

- Screenshot 2: Change language screen (misleading update banner)

## Notes

- Reproduce across multiple devices / OS versions to confirm whether it's layout engine specific.
- Please advise whether this needs a hotfix for the current production build.
